Carbon Reduction Plan

JTG Consulting Group Ltd

Company number 15830590 | UK operations

Reporting period: 1 August 2025 to 31 July 2026
Publication date: 30 October 2026

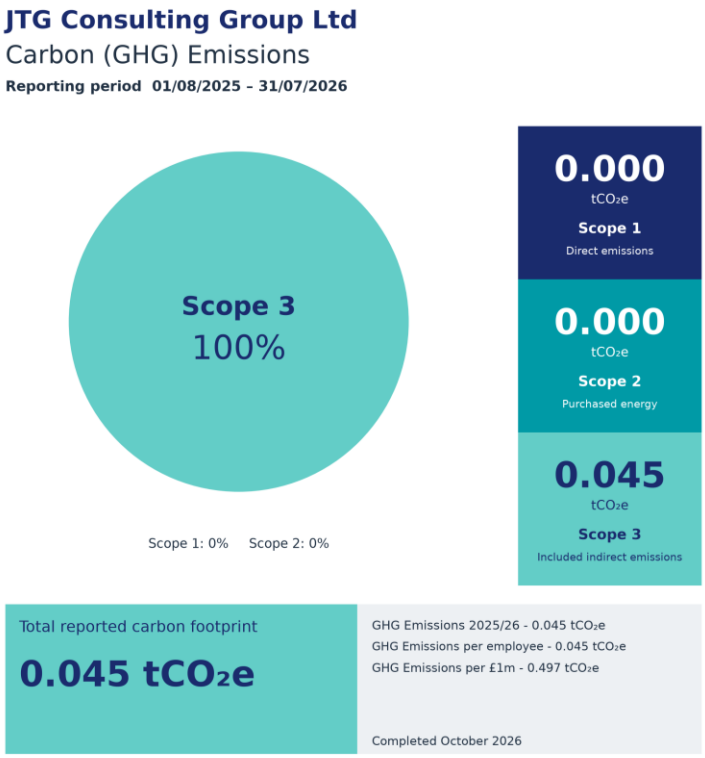

Commitment to achieving net zero

JTG Consulting Group Ltd is committed to achieving net zero emissions by 2040.

Baseline and current emissions

The year ending 31 July 2026 is our first reporting year and baseline year. The baseline and current emissions are therefore the same. This initial baseline reflects a period of limited operational activity and is not an annualised forecast.

Emissions	Baseline FY 2026 tCO_2e	Current FY 2026 tCO_2e
Scope 1	0.000	0.000
Scope 2	0.000	0.000
Scope 3 included sources	0.045	0.045
Total reported emissions	0.045	0.045

Reporting boundary and methodology

The inventory covers JTG Consulting Group Ltd's UK operations using the operational-control approach, which accounts for emissions from activities the company controls.

Scope 1 and Scope 2 emissions are reported as zero because JTG has no company vehicles, fuel-burning equipment or purchased electricity or heating within this boundary. Employees' homes and shared workspaces are not under JTG's operational control.

The five required Scope 3 categories are addressed below. Business travel and employee commuting are reported as a combined total, without double counting, because the available records do not reliably distinguish between the two categories.

Required Scope 3 category	Reporting treatment
4 Upstream transportation and distribution	Included: estimated delivery emissions for purchased equipment.
5 Waste generated in operations	Included: estimated emissions from recycling equipment packaging.
6 Business travel	Included in the combined travel estimate.
7 Employee commuting	Included in the combined travel estimate.
9 Downstream transportation and distribution	Not applicable: no distribution of physical products sold.

Emissions are expressed in tonnes of carbon dioxide equivalent (tCO_2e), using 2026 UK Government conversion factors and supplier product carbon-footprint data. Reasonable estimates have been used where measured distances, delivery data or waste weights were unavailable. The reported figures are estimates, not independently audited measurements.

Supplier transport data are used as a conservative proxy for equipment delivery. The proxy may cover a wider transport chain than the minimum reporting boundary. Supporting calculations and assumptions are retained separately.

The inventory includes the Scope 3 categories required for procurement reporting. Optional homeworking emissions and other Scope 3 categories, including equipment manufacture, equipment use at home and purchased workspace services, are outside this reporting boundary.

Emissions reduction targets

Our target is to achieve net zero emissions by 2040. As this is our first baseline, no historical reduction is claimed. We will review emissions annually and establish interim reduction targets following the first full year of operational data. The review will consider changes in business activity and the comparability of the initial baseline.

Carbon reduction projects

The following measures are already in place and will continue to support emissions reduction in the delivery of our services:

Measure	Action
Remote collaboration	Use remote working and online meetings to reduce the need for travel.
Lower-emission travel	Use public transport for business journeys where practical.
Digital working	Use digital documents and workflows to reduce paper consumption.
Responsible technology	Recycle equipment packaging and use Dell's UK recovery and recycling services for eligible equipment when it reaches end of life.

Over the next reporting year, we will improve travel and purchasing records, review opportunities to reduce avoidable travel, and extend equipment life through maintenance and reuse where practical. We will update this plan annually, within six months of our financial year-end.

Declaration and sign off

This Carbon Reduction Plan has been prepared in accordance with PPN 006 and its associated guidance, using the reporting structure also required under PPN 06/21 where applicable to the procurement.

Emissions have been reported using the GHG Protocol Corporate Accounting and Reporting Standard and the Corporate Value Chain (Scope 3) Standard, with appropriate UK Government conversion factors and the estimation methods described in this plan. Scope 1 and Scope 2 reporting follows the applicable UK environmental reporting guidance, including SECR requirements where required.

Board approval and director sign-off of this plan are to be recorded below before publication.

Approved on behalf of the Board and signed off by:

Jamel Giuma, Director, President and CEO
Approval and sign-off date: October 2026
